Non-GAAP Financial Measures

This communication includes certain non-GAAP financial measures that we regularly review to evaluate our business and trends, measure our performance, prepare financial projections, allocate resources, and make strategic decisions. We believe these non-GAAP measures help to illustrate the underlying financial and business trends relating to our results of operations and comparability between current and prior periods. We also use these non-GAAP measures to establish and monitor operational goals. However, these non-GAAP measures are not superior to or a substitute for prominent measurements calculated in accordance with GAAP. Rather, the non-GAAP measures are meant to be a complement to understanding measures prepared in accordance with GAAP.

Gross Profit and Gross Profit Margin

The Company's non-GAAP gross profit metric represents revenues less costs of services. Gross profit margin is gross profit divided by revenues. We review these non-GAAP measures to evaluate our underlying profit trends. The reconciliation of gross profit to its most comparable GAAP measure is provided below:

EBITDA and Adjusted EBITDA

EBITDA and adjusted EBITDA are performance measures. EBITDA is earnings before interest, income tax, and depreciation and amortization expenses ("EBITDA"). Adjusted EBITDA begins with EBITDA but further excludes certain non-cash costs, such as stock-based compensation and the write-off of the carrying value of investments or other assets, as well as debt extinguishment and modification expenses and other expenses and income items considered non-recurring, such as acquisition integration expenses, certain professional fees, and litigation settlements. We review the non-GAAP adjusted EBITDA measure to evaluate our business and trends, measure our performance, prepare financial projections, allocate resources, and make strategic decisions.

The reconciliation of adjusted EBITDA to its most comparable GAAP measure is provided below:

Priority does not provide a reconciliation of forward-looking non-GAAP financial measures to their comparable GAAP financial measures because it could not do so without unreasonable effort due to the unavailability of the information needed to calculate reconciling items and due to the variability, complexity and limited visibility of the adjusting items that would be excluded from the non-GAAP financial measures in future periods. When planning, forecasting and analyzing future periods, the Company does so primarily on a non-GAAP basis without preparing a GAAP analysis as that would require estimates for various cash and non-cash reconciling items that would be difficult to predict with reasonable accuracy. For example, stock-based compensation expense would be difficult to estimate because it depends on the Company's future hiring and retention needs, as well as the future fair market value of the Company's common stock, all of which are difficult to predict and subject to constant change. As a result, the Company does not believe that a GAAP reconciliation would provide meaningful supplemental information about the Company's outlook.
